Semiconductor Physics And Devices: Basic Principles

A semiconductor material has an electrical conductivity value falling between that of a metal, like copper, gold, etc. and an insulator, such as glass. Their resistance decreases as their temperature increases, which is behaviour opposite to that of a metal. Their conducting properties may be altered in useful ways by the deliberate, controlled introduction of impurities ("doping") into the ...

History. The effects of semiconductor doping were long known empirically in such devices as crystal radio detectors and selenium rectifiers. For instance, in 1885 Shelford Bidwell, and in 1930 the German scientist Bernhard Gudden, each independently reported that the properties of semiconductors were due to the impurities contained within them. The doping process was formally first developed by ...

The Compound Semiconductor Week (CSW) is the premier forum for science, technology and applications of compound semiconductors. As in previous years, CSW 2018 brought together the 45TH International Symposium on Compound Semiconductors (ISCS) and the 30TH International Conference on Indium Phosphide and Related Materials (IPRM).
