The atomic nucleus is the small, dense region consisting of protons and neutrons at the center of an atom, discovered in 1911 by Ernest Rutherford based on the 1909 Geiger-Marsden gold foil experiment. After the discovery of the neutron in 1932, models for a nucleus composed of protons and neutrons were quickly developed by Dmitri Ivanenko and Werner Heisenberg.

Atomic nucleus - Wikipedia

In physics, acceleration is the rate of change of velocity of an object with respect to time. An object's acceleration is the net result of all forces acting on the object, as described by Newton's Second Law. The SI unit for acceleration is metre per second squared (m s^{-2}). Accelerations are vector quantities (they have magnitude and direction) and add according to the parallelogram law.

Acceleration - Wikipedia

L'effetto tunnel è un effetto quanto-meccanico che permette una transizione ad uno stato impedito dalla meccanica classica

Effetto tunnel - Wikipedia

è, in fisica, un fenomeno che si verifica in meccanica quantistica, in cui una particella può attraversare una barriera di potenziale anche se la sua energia è inferiore all'altezza della barriera stessa. Questo fenomeno è alla base di molti processi fisici, come la conduzione nei semiconduttori, la fusione nucleare e il tunneling nei superconduttori. Il tunneling è un fenomeno puramente quantistico e non ha analogo in meccanica classica.
